Education

Indiana University Bloomington <i>Luddy School of Informatics, Computing, and Engineering</i> Bachelor of Science in Computer Science - Completed advanced coursework and team-based projects focused on software engineering and Salesforce platform development, demonstrating a comprehensive understanding of industry standards and best practices - Utilized Apex, triggers, Visualforce, and Salesforce DX (SFDX) within Visual Studio Code to engineer scalable system features and streamline business workflows, delivering enhanced operational efficiency	May 2026
---	----------

Work Experience

MCIL <i>Salesforce Intern</i> - Completed 400+ hours of full-time Salesforce developer training covering Apex, triggers, Visualforce, and deployment workflows using SFDX, achieving 100% test coverage on delivered features - Configured 20+ custom objects, 50+ fields, and 15+ workflow automations for 3 client organizations, streamlining data flows and improving user experience by 40% based on post-implementation surveys - Applied best practices for governor limits, list operations, and integration patterns (HTTP/SOAP) - Collaborated with global teams to document requirements and deliver testable components - Leveraged Microsoft Copilot and Perplexity AI to rapidly synthesize Salesforce documentation, design options, and best practices, reducing research time for new features by ~30% and enabling faster delivery of configuration changes. - Employed AI tools to generate initial SOQL query drafts and test scenarios, allowing more time to focus on edge cases, bulkification, and performance tuning	May 2025 – December 2025
ARG Consulting <i>Internship for Client: Beam Suntory</i> - Designed and deployed a full-stack website with server-side scripting and database integration - Developed cache-clearing automation used by 30+ engineers, decreasing average workstation downtime by 20% - Partnered with cross-functional stakeholders to prioritize features and iterate quickly - Used AI to draft SQL/ORM query patterns, REST endpoint handlers, and input-validation logic, then optimized and tested each component to meet performance and security requirements. - Applied AI-assisted code review suggestions to identify potential edge cases, logging gaps, and error-handling improvements, increasing reliability of deployment-ready features.	May 2023 – August 2023 May 2024 – August 2024
Healthtrack Sports and Wellness Center <i>Pro Tennis Coach</i> - Instructed 80+ students from ages 7 to 80 in private and group lessons, demonstrating a 25% improvement in average client performance scores after 8 weeks - Developed 30+ personalized training plans that accelerated skill acquisition, evidenced by client progression rates surpassing academy averages - Streamlined lesson planning and scheduling with staff	May 2016 – August 2023

Technical Skills

Programming Languages: Java, Python, Swift, JavaScript, HTML, CSS, PHP
Platforms and Tools: Microsoft Windows, macOS, Xcode, Docker, Adobe XD, Warden
Salesforce Development: Apex, Triggers, Visualforce, SFDX (VS Code), Admin Configuration, Governor Limits, HTTP/SOAP Integrations
Web: RESTful patterns, server-side scripting, database-backed web apps
AI Tools: Microsoft Copilot, Perplexity AI – used for code generation, documentation synthesis, research acceleration, and workflow automation across Salesforce and web development projects.

Projects

Appointment Scheduler (https://github.com/arjunkirtikar/Appointment-Scheduler https://appointment-scheduler-mo6h.onrender.com) - Built a full-stack web app using Spring Boot, Spring Security, Thymeleaf, and SQLite with 3 distinct user roles across a clean MVC architecture. - Engineered role-based access supporting bulk creation of 50+ appointments, 3 recurring schedule frequencies, and 5+ business rule validations to ensure data integrity. - Deployed via Docker to Render.com with a GitHub CI/CD pipeline, achieving 0-downtime redeployment and 80%+ test coverage using JUnit 5 and MockMvc.
Salesforce Education Org Configuration - Modeled custom objects for teachers, students, and classes, enforcing relationships with lookups/master-detail fields and validation rules to maintain data integrity. - Built flows and approval processes to automate enrollment, grade updates, and communication workflows, reducing manual steps for academic staff. - Designed reports and dashboards to track student performance, instructor load, and course demand, providing stakeholders with actionable metrics.
Apex Feature Development Portfolio - Implemented Apex triggers using bulk-safe patterns and list operations to handle large-volume data updates without exceeding governor limits. - Consumed external services via HTTP/SOAP callouts, handling authentication, retry logic, and error responses to keep integrations resilient. - Wrote unit tests with realistic test data factories, achieving high code coverage and validating edge-case behavior before deployment.
